

ComPlan

Plant, Asset & Equipment Commissioning System Features

The multi-faceted solutions offered by our commissioning and completing system is perfect for any operation involving field testing or similar technical functions. Originally developed to meet the needs of project managers and engineers performing field testing and commissioning of plant & equipment, the application includes an array of modules for keeping track of assets, clients, and vendors, as well as organizing jobs and improving testing processes.

The application features a special Microsoft Word Mail Merge functionality to enable the quick execution of template-based documents focusing on the specific needs of any operation.

In addition to this versatile feature, you'll find:

- :: Organizational Tracking for Projects and Jobs, Customers and Clients, and Suppliers and Vendors
- :: Asset, Plant, and Equipment Registers (parent & child equipment linking)
- :: Field Testing Records
- :: Punchlists
- :: MDRs
- :: Technical Queries
- :: Notice of Energisations
- :: Snapshot screen to effectively manage the commissioning status at the PLU level

The success of this application in helping businesses excel is evident in its recent use for the commissioning of Rio Tinto's Argyle Underground Diamond Mine; have a look at the distinct advantages available from this application with our video <http://www.matrixconsultants.com.au/Commissioning.html>
