

## Galvatrak

### Product Features

Originally developed for steel producing, acquiring, and processing industries, our job management software system is proudly offered as the product of several years of testing within the context of some of the most demanding, large-scale business situations found today.

The job management system is specifically geared towards businesses operating in the steel anti-corrosion, steel and metal treating, and metal finishing industries, as well as businesses that work with industrial painting, galvanizing, heat treatment, powder coating, electro-plating, and zinc plating).

Through allowing you to take greater control over basic business operations and providing a well-organized and clear picture of your company at any point, our job management system can lead to major improvements in efficiency.

The application covers key concepts and concerns in:

- :: Customer Relationship Management (CRM)
- :: Quotations
- :: Job Management
- :: Production Scheduling
- :: Quality Control
- :: Key Performance Indicators (KPIs)
- :: Logistics Management
- :: Time Management
- :: Steel Tracking
- :: Reporting (utilising Shockwave Flash to present live graphs)

Best of all, you can access your individual system at any time via the web, letting you and your employees benefit from the improved organization and data availability without the need to perform any installations. You can also grant your customers access to the system to let them track progress and delivery.

See for yourself how a professionally designed job management system can change the way you operate for maximised results.
